

CHRISTOPHER LEE RAMIREZ

Candidate Current Location	Round Rock, TX
Availability to Interview	24-hour notice
Date Available to Start	Immediately available
Email	chris@512atx.com
Phone	512.757.7399
Website	https://clramirez.com
Cover Letter	https://clramirez.com/cover-letter/
Current Résumé/CV	https://clramirez.com/resume-cv/
Please explain why you feel this candidate is the best fit for this position / provide any additional comments	Christopher has 20+ years of experience in Change Management – Process Improvement, Systems & Network Engineering/Administration, and Security Administration. Chris has extensive experience in Server and Computer systems for building, troubleshooting, configuring, and maintaining a server environment. He is proficient working in Linux, Mac, and Windows environments; has obtained multiple industry recognized certifications (all on his own time & dime) to validate his knowledge, and continues to further educate himself during his downtime: MCSA/MCSE (01/31/21) , CISSP, and RHCSA/RHCSE, ITIL, Azure, AWS, GCP

PROFESSIONAL SUMMARY:

- **Systems & Network Engineer | Security Administrator**
- Extensive experience of 8+ years: Knowledge and ability to perform all the basic system administration skills of server and database management. Involved in hardware changes of system process for critical Transfer systems.
- Ability to participate in business development and technical framework issues, in addition to recognizing inefficiencies and helping implement a solution (server, Visio diagram, service delivery model), Active Directory & LDAP support and expertise – [Microsoft 70- 410](#) / [Microsoft 70- 411](#) / [Microsoft 70-412](#) / [Microsoft 70-744](#)
- Provide support and expertise for Office 365 & G-Suite
- Experience with multiple Operating Systems: Windows (2008 R2 – 2019), Linux (RHEL/CentOS, OpenSUSE, Ubuntu)
- Experienced in Websense Proxy/URL content filter (Websense/ForcePoint), Cisco IronPort Email Security (Cisco), McAfee SIEM and implementing automated reports, automated quarantine at TippingPoint IPS (American Campus), KACE Systems Management & Imaging Appliance – Patching/Updates K1000 and Image Deployment K2000, Meraki Networking, AppAssure/Rapid-Recovery (Backup/Data-Protection), Veeam (Backup/Data-Protection)
- Data Center Experience (I.M.A.C.D. – install, move, add, change, disposal):
 - Imaging Servers (PXE installation and management experience through both Dell iDRAC & HP iLO)
 - Racking Servers (use server dolly if necessary, install rails prior to installation)
 - Cabling Servers (both power A/B, and networking)
 - Confirming Server installation as configured properly (pinging server, logging into server via iDRAC/iLO, SSH/telnet, RDP, or logging into application installed/configured: SQL, Web Server, etc.)
 - Troubleshooting/Reconfiguring/Decommissioning Servers (replacing failed disks, relocating server from one rack to another, decommissioning servers)

TECHNICAL SKILLS & CERTIFICATIONS:

Windows	Networking	Security	Virtualization	Database & Cloud
MCSE: Server 2012 Exam: 70-744	Meraki: CMNA	Netskope: NCSA	VMware: VCP-DCV	AWS: Solutions Architect Associate
MCSA: Server 2012 Exam: 70-412 Exam: 70-411 Exam: 70-410	Cisco CCENT CompTIA Network+	CompTIA: Security+		MCITP: SQL Server MCITP: Office 365

PROFESSIONAL EXPERIENCE:

- IT Contracting Roles 2012 – 2021
- Currently seeking Long-term Contract or Full-Time Permanent Role

Kiewit (Blue Sky Project) – Taylor, TX

December 2022 – July 2024

Field IT Technician

- Installed all Ethernet cable required for "BlueSkyNet" and first Epcor trailer expansion
- Installed and configured all network equipment (router, firewall, switches, AP's, wireless bridges, and security cameras) for "BlueSkyNet"
- Network/Security Admin for "BlueSkyNet" network deployed throughout the entire construction site
 - Implemented AirFiber (1Gbps up/down) wireless Point-to-Point link via cell phone tower
 - Expanded network throughout the entirety of the construction site via Point-to-Point & Point-to-Multipoint wireless links: where Ethernet or Fiber could not be used (Warehouse, Construction Site, Lay-down yards, Guard Shacks, and connexes) I was able to connect those remote locations to the network
 - Provided Internet connectivity for Staff, Craft, and Subcontractors on-site via "BlueSkyNet" in and around the Control and R.O. Buildings, as well as the surrounding areas throughout the Construction Site
 - 18+ security cameras placed throughout the construction site to provide continuous security surveillance throughout the job-site
- SharePoint Admin - provided SharePoint access to employees (Kiewit, Sundt, Corbins, SamuelEPC, Atlas Electric, and Epcor) that joined the Blue Sky Project
- Responsible for providing Technical Support for all Staff, Craft, Subcontractors, and Client employees (Kiewit, Sundt, Corbins, SamuelEPC, Atlas Electric, and Epcor)
- Onboard employees (Kiewit, Sundt, Corbins, SamuelEPC, Atlas Electric, and Epcor) to the Blue Sky Project: Office 365 licensing, AD credentials, configure 2FA, gain necessary access required to the tools used on the Blue Sky Project: SharePoint, InEight, TeamBinder, SAP, connect to network printer, and confirm end-user had all necessary access required to perform their specified role/tasks
- Assist in iPhone/iPad procurement with vendor (E2), configure device for end-user, register and administer mobile device through InTune MDM
- Assist in configuring iPhone/iPad for end-user and troubleshooting various job-specific apps (InEight Progress, Completions, Model, TeamBinder, DVI, etc.) - users would not be able to login, unable to sync, unable to sign craft employees out for end of shift, claim quantities, or perform Care & Preservation tasks required
- IT Asset Inventory Management
- Provide A/V technical assistance for Conference Rooms
- Researched and Implemented Conference solution at Old Taylor High – Shure Stem Conference Room speakerphones, and wired up the entire room (both Ethernet and A/V equipment)
- Provide Technical Support for 3 locations: 30-Acres (main Construction site), Batch Plant (secondary Construction Site), and Old Taylor High (Executive Conference Room)

Iron Ox – Austin, TX

August 2021 – September 2022

Senior Systems Engineer

- Responsible for infrastructure (planning and maintenance) of all IT related processes and hardware in both the office and production environments
- Implementation of Active Directory on Windows, Mac, and Linux PCs
- Configuration of Meraki firewalls, switches, and wireless access points
- Creation of new accounts across all company applications for new hires
- Creating scripts to automate various processes for both server environment and new PC deployments
- Maintaining and troubleshooting virtualized server infrastructure

- Continuous process improvement across all company devices and processes
- Implementation and maintenance of video conferencing equipment and software
- Implementation of security/badge systems and working with vendors to ensure best practices are followed to maintain proper security clearance and access
- Implemented production labeling process to ensure shipped products can be tracked from beginning of process to final store sale for food safety/auditing purposes
- Working with IT projects and IT help tickets in Jira as well as creating new categories and priorities to better track metrics within Jira

Texas Systems Group, Austin, TX (Concerns: COVID-19)

December 2020 – February 2021

Systems and Network Engineer

- Point-of-Contact was CXO or other high-ranking official: ability to communicate (written/spoken) effectively was key
- Exhibit exceptional Customer Service while attempting to diagnose & resolve any underlying problem
- Point of escalation for Helpdesk Team to provide additional assistance or guidance with customer issues: Active Directory, Networking, Security, Office 365, Backup, PBX, SharePoint, etc.
- Tools utilized while at Texas Systems Group:
 - **ConnectWise Manage** – CRM/ERP system used to document client service tickets (and time) spent on each ticket using: client communication, troubleshooting steps performed, next steps, etc.
 - **ConnectWise Automate/ScreenConnect** – Remote assist used to manage/troubleshoot servers & endpoints
 - **Duo** – 2FA used as added layer of security for sensitive applications
 - **Meraki/Unifi** – Cloud networking used for client networks: easy insight and edit of customer environments
 - **Umbrella DNS** – URL Content Filter: security used prevent attacks, and promote employee productivity
 - **Office 365** – Manage Active Directory, email, and SharePoint via Cloud for clients: employee onboarding/terminations, IMACD (install, move, add, change, delete) requests
 - **Veeam/Datto** – backup software used for client DataProtection
 - **Auvik** – Network Monitor application used to generate automated alerts
 - **Addigy** – Remote Mac Device Management
 - **AllWorx** – VoIP solution

Barton Associates, Austin, TX (Furloughed: COVID-19)

June 2019 – December 2020
